SUBUNIT: Forms a complex with E6-AP ubiquitin-protein ligase which interacts with human P53. Binds to human PBLN1 and MPDZ.
SUBCELLULAR LOCATION: Nuclear matrix-associated (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY: Belongs to the papillomaviruses E6 protein family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Them. Biophys. Res. Commun. 296:962-969(2002).
FUNCTION: Transcriptional transactivator. Binds double strans DNA (By similarity). Has transforming activity. Inactivates, E6-AP ubiquitin-protein ligase, the human TP53/p53 tumor suppressor protein by targeting it to degradation. Binds and targets human MUPPI/MPDZ protein to degradation. Those two functions presumably contribute to transforming activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Interaction with human FBLN1 protein also seems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       122
